Horizontal Line

- A horizontal line can be used to split up sections of a webpage.
- To add a horizontal line, use `<hr>`. This tag does not have a matching closing tag.
Lists

- An ordered list numbers the items in their list. A ordered list is started with an <ol> tag and closed with </ol>.
- An unordered list uses bullets at each item of the list. This list is started with <ul> and ended with </ul>.
- Each item of either list is started with <li> (list item) and closes with </li>
Ordered List

- Ordered list:
  
  - List item one
  - List item two
  - List item three

1. List item one
2. List item two
3. List item three
Unordered list

- Unordered list:
  
  <ul>
  
  <li>List item one</li>
  <li>List item two</li>
  <li>List item three</li>
  
  </ul>
Bold, Italics, and center

- To **bold** text for emphasis, use `<b>` and `</b>` to close.
- To *italics* text for a different emphasis, use `<i>` and `</i>` to close.
- To center an element, use `<center>` and `</center>` to close.
Tables

- Tables are great to organize information. To make a table you use `<table>` and `</table>` to close.
- To make a row in a table, use `<tr>` and `</tr>` to close.
- To make a column in a table, use `<td>` and close with `</td>`. 
Table Example

<table>
<tr>
  <td>one</td>
  <td>two</td>
</tr>
<tr>
  <td>three</td>
  <td>four</td>
</tr>
</table>

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>
Table Captions

- To add an title to a table, you can use `<caption>` and `</caption>` inside of a table. This tag work similar to the title tag but for tables.

- Example:

```html
<table>
    <caption>title</caption>
    <tr><td>one</td><td>two</td></tr>
    <tr><td>three</td><td>four</td></tr>
</table>
```
Width and border attributes

- Borders can be added to many tags by adding `border=NUMBER`
- The `NUMBER` used with `border` is the number of pixels to make the border.
- Example:

```html
<table border=3>
  <caption>title</caption>
  <tr><td>one</td><td>two</td></tr>
  <tr><td>three</td><td>four</td></tr>
</table>
```
Width and height

- Width and height can also be added to many tags such as tables and images. To specify the width add width=NUMBER of width=%% to the opening of a tag. Height is applied the same way as width but with height=NUMBER or %
- The % used with width and height is a percentage of the size of the viewable webpage. Some elements such as tables do have a minimum width and/or height.
Width and Height Example

```html
<table border=3 width=300 height=300>
  <caption>title</caption>
  <tr>
    <td>one</td>
    <td>two</td>
  </tr>
  <tr>
    <td>three</td>
    <td>four</td>
  </tr>
</table>
```
Create a web page with the following:

- Title 5 points
- Background changed 5 points
- Internal link 10 points
- External link 5 points
- ordered & unordered list 15 points
- Horizontal line 5 points
- Heading 10 points
- Table 15 points
- Center, bold, italic 10 points
- Changed font (color & face) 5 points
- A line break 5 points
- Aesthetic appeal 10 points
